MAYNE MAPS - WINERY SAMPLE MAPS

Majella Coonawarra Vineyard in South Australia

The Majella Vineyard is a small boutique vineyard in South Australia (www.majellawines.com.au).

To map a winery such as this, Alan uses many sources of data.

He extracts the relevant information from topographic maps as well as satellite images.

This is updated with any farm irrigation maps or other maps that the owner may have and then any spreadsheet information is included.

To complete the project, GPS data is often used. This data can be collected by the property owner or collected by Alan on-site.

If the property owner captures his own GPS information, the files can be emailed to Alan to reduce costs.

When the map is completed, it can be exported into a multitude of file types depending on the needs of the client.

These maps can be used for display at the cellar door, for promotion on the internet, for developing the property and for marketing.

This map can be georeferenced and used by management as an actual scale map for managing and running the property.

Exciting new GPS technology enables GPS receivers to use these maps on the face of the GPS units. This enables the property owner to travel around his property viewing his property map moving past him on his GPS screen - ideal for precise GPS navigation and recording.

Winery maps such as these have been produced for properties in Tasmania and New Zealand without Alan leaving Queensland.

Often wineries ask for Location Maps to assist clients to locate the winery when they visit. (See Location Map Tab)

A map such as this will cost between \$500 and \$1000 depending on a number of factors.

Contact Mayne Maps and tell Alan about your property and your requirements. He will provide an indication of the cost and also send you samples of maps similar to your property that he has produced in the past.
