MAYNE MAPS - OLIVE ORCHARD MAPS

To map an olive farm or a macadamia orchard such as this, Alan uses many sources of data.

He extracts the relevant information from topographic maps and satellite images.

This is updated with any farm irrigation maps and other maps that the owner may have. Spreadsheet information is then included.

To complete the project, GPS data is often used. This data can be collected by the property owner or collected by Alan on-site.

If the property owner captures his own GPS information, the files can be emailed to Alan to reduce costs.

When the map is finished, it can be exported into a multitude of file types depending on the needs of the client.

These maps can be used in the office, for promotion on the internet, for developing the property and for marketing.

The maps can be georeferenced and used by management as actual maps for managing and running the property.

Exciting new GPS technology enables GPS receivers to use these maps on the face of the GPS units. This enables the property owner to travel around his property viewing his property map moving past him on his GPS screen - ideal for precise GPS navigation and recording.

Property maps have been produced for properties in South Australia, Tasmania and New Zealand without Alan leaving Queensland.

Often, property owners ask for Location Maps to help visitors to locate the property when they visit. (See Location Map Tab)

A map such as this may cost \$1000 or so depending on a number of factors.

Contact Mayne Maps and tell Alan about your property and your requirements. He will provide an expected price or a quote and also send you samples of maps similar to your property that he has produced in the past.
